Sagem Orga Unveils direct-to-card Fingerprint Technology

Sagem Orga (Safran group) is presenting its latest access technology, ypsID Direct-to-Card fingerprint.

The solution by Sagem Orga offers several improvements, such as GSA and Minex II approval and a one-touch login. Sagem Orga is a subsidiary of Sagem Sécurité, the world leader in digital fingerprint biometrics.

The Direct-to-Card fingerprint technology is designed to guarantee maximum privacy for users when corporate or government employees access sensitive user information such as medical records or financial reports or when the users sign high-value transactions such as those in trading rooms.

With Direct-to-Card fingerprint technology, the user's biometrics are kept confidential between his or her own smart card and the biometric sensors and never pass through the user's workstation. The solution is the new Sagem Orga ypsIDTM BioReader model in the GSA-approved Sagem Sécurité MorphoSmart range of products and the Sagem Orga ypsIDTM smart card S2, featuring Sagem Sécurité's latest MINEX II approved Match-on-Card algorithms.

This best-of-breed solution helps organizations comply with the strictest accountability requirements in identity security. At the same time it offers great convenience to users, who are now able to perform a one-touch login on their computers thanks to Sagem Sécurité's advances in biometrics extraction and matching algorithms.

Corporate and public sector bodies who are integrating information security systems have expressed their desire to move forward with the implementation of Sagem Orga ypsID converged badge solutions.

The introduction of Direct-to-Card fingerprint technology further demonstrates Sagem Orga's ability to deliver innovative solutions that meet the requirements of corporate organizations and administrative bodies regarding Identity & Access Management around the world.

OLCSAN CAD

OLCSAN CAD Teknolojileri Türkiye ve EMEA bölgesi'ndeki güvenlik ve akıllı kart sektörleri için bir çözüm tedarikçisi ve uygulama geliştiricisidir. ÖLCSAN ürün portföyü akıllı kartları, terminalleri ve EMV gibi uygulamaları, kişiselleştirme, terminal yönetimi, bağlılık, elektronik portföy, PKI, lojik ve fiziksel erişim, transportasyon, biyometrikler ve telekomünikasyon çözümlerini içine alır. Firma bankacılık, e-hükümet, sağlık, Kimlik, transportasyon ve telekomünikasyon sektörleri için anahtar teslimi çözümler temin eder ve aynı zamanda profesyonel danışmanlık hizmetleri sunar.
